

Proclamation 6614—National Forest Products Week, 1993

October 16, 1993

*By the President of the United States
of America*

A Proclamation

Our National Forests are a priceless heritage, a gift that we hold in trust for future generations. As stewards of this inheritance, we have the obligation of preserving the capacity of these lands to sustain, not only themselves, but also the species that depend on them. Even as we strive to fulfill this obligation, the American people are asking fundamental questions about how our National Forests are managed and about how best to ensure a healthy and productive land.

Much has already been done to protect our forests. Of the 191 million acres of National Forest, 34 million have been set aside as part of the wilderness preservation system, a system that safeguards wilderness for future use and enjoyment. National Forests include more than 4,300 miles of designated segments of the National Wild and Scenic Rivers Systems. These rivers are maintained in a free-flowing condition for the enjoyment of this and future generations.

Much more remains to be done, and we are only beginning to fathom, however incompletely, the complexities of the ecosystems of which our National Forests are composed. We know that over 250 threatened and endangered species of fish, animals, and plants inhabit National Forests and are dependent on them for survival. We also know that the key to protecting these and other species is to maintain healthy ecosystems through effective management of National Forests. In addition, we now understand that our forests are only one part of a global mosaic of forest ecosystems and that, if we are to be a world leader in environmental conservation, our stewardship must set standards for the world to emulate.

Our National Forests are also vital to our physical and spiritual well-being. National Forests are the single largest provider of outdoor recreation in the United States, providing 288 million visitor days at Forest Service

campgrounds, picnic areas, and other recreation attractions in the past year. Products generated from National Forests support jobs for hundreds of thousands of workers, most located in rural America. People whose livelihoods are dependent on forest products industries must be considered as we reexamine the role of National Forests in promoting the welfare of all Americans.

Clearly, we are moving toward a new era in the stewardship of public lands. This new era is one in which we must blend environmental values with the needs of people in such a way that the National Forests represent diverse, healthy, productive, and sustainable ecosystems. Ecosystem management must be grounded on sound science and on compliance with existing law.

In recognition of the central role our forests play in enhancing the welfare of our Nation, the Congress, by Public Law 86-753 (36 U.S.C. 163), has designated the week beginning on the third Sunday in October of each year as "National Forest Products Week" and requested the President to issue a proclamation in observance of this week.

Now, Therefore, I, William J. Clinton, President of the United States of America, do hereby proclaim the week beginning October 17, 1993, as National Forest Products Week and call upon all Americans to observe that week with appropriate ceremonies and activities.

In Witness Whereof, I have hereunto set my hand this sixteenth day of October, in the year of our Lord nineteen hundred and ninety-three, and of the Independence of the United States of America the two hundred and eighteenth.

William J. Clinton

[Filed with the Office of the Federal Register, 2:58 p.m., October 18, 1993]

NOTE: This proclamation was published in the *Federal Register* on October 20.

Remarks to the National Breast Cancer Coalition

October 18, 1993

Thank you very much. Secretary Shalala and Fran, Dr. Love, distinguished Members

of Congress, Mrs. Cuomo, Mrs. Florio, and all of you distinguished guests. It's wonderful for me to be here today.

I was sitting here thinking that I more or less feel like the fifth wheel now. Just about everything that needs to be said has been said. But we sort of felt one man ought to talk on this program. And I won the lottery. *[Laughter]*

In the 3 minutes that will elapse at the beginning of this talk, another American woman will be diagnosed with breast cancer. If I speak for 12 minutes, another woman will die of it during the course of the remarks. And yet we know that one in every three American women does not receive the basic services, like mammographies, which can help to detect breast cancers and that the cost of not dealing with this amounts to about \$6 billion a year to this country over and above all the human heartbreak involved.

Now that means that this is another one of those terrible American problems that is not only tearing the heart out of so many families but also has left us again with no excuse for why we would spend so much money picking up the pieces of broken lives when we could spend a little bit of money trying to save them.

We know all the stories; many of you here are the stories. I appreciate the reference to my brave mother, who struggles on with her breast cancer condition and who has resumed her remarkable life, but who also knows how much more we need to do. I'm glad to see Sherry Kohlenberg's husband and son here. When she came to see us in the Oval Office—Sherry was one of our 50 faces of hope, and we kind of keep up with all those folks that, to us, symbolize what we wanted this administration to be about. And when Sherry came to see us last June with Larry and with Sammy, she said, "Don't ever forget what this does to the people who are left behind." And I'm glad to see them here today, and I'm glad they had the courage to come to remind us of that.

Since we know that there are a lot of things we don't know, it's important that we focus on research as well as treatment, that we focus on detection early as well as care. In my first budget submission, I recommended

the creation of the office of research on women's health and the largest increase in funding for breast cancer research in the history of the National Institutes of Health. When you add that up to the increased funding for detection and preventive services at the Center for Disease Control, the Food and Drug Administration, and the Department of Defense, together the combined expenditures approved by this Congress, thanks in no small measure to these women who are here, amounts to about \$600 million this year alone.

I also want to emphasize that in the health security plan that I have proposed to the Congress we provide for increases, not decreases in medical research and a means to fund those increases in medical research. We cannot provide basic security to all Americans and forget about the research that needs to be done on the things we don't know how to cure yet.

To help to coordinate our research and delivery efforts, in mid-December Secretary Shalala will bring together a broad range of health professionals, Government agencies, and groups like yours to develop a national action plan for the prevention, the diagnosis, and the treatment of breast cancer. A national strategy is what these petitions are all about. And while I am trying to reduce the volume of paperwork in Washington—*[laughter]*—frankly, I'm glad to see these here. We will do better, and you will help us. And we will have this national action plan.

I also want to point out that the health security plan that Hillary and I are fighting so hard for, along with the other members of our administration, will also fundamentally change the dimension of the fight against breast cancer. It is a plan that clearly shows the sign of several strong women at work, including two on this platform, based on the notion that when it comes to health care research and delivery, women can no longer be treated as second-class citizens.

We began to manifest that commitment, frankly, in this budget which was just passed, in which virtually everything was cut or frozen but which increased services for early

childhood and for little children. We also believe that we have to further increase our investments in these things, in prenatal, in maternal and child health care and nutrition, and in detecting and preventing diseases.

We believe that we need a health security plan that guarantees to every American a comprehensive package of benefits that not only can never be taken away but that includes preventive services to try to keep people well as well as help them when they're sick. We believe that some of these preventive services are so important that they should indeed entail no out-of-pocket costs at all to American citizens when the considered medical judgment is that everybody should get them on a regular basis. That includes routine clinician visits and not only appropriate breast exams but also important procedures like immunizations and Pap smears.

We also know that we can reduce deaths by making mammography widely available and by encouraging its use. And this plan covers these mammograms at no additional cost to patients for all women over 50 and provides mammograms where important in the judgment of the physician and the woman in every case where there is a health care plan. So if this plan passes, for the first time everybody who's got a health insurance policy, which will be everybody in America, will have mammograms in the policy. That is a very important thing.

The unique structure of this plan, with some preventive benefits absolutely free to Americans in the highest risk categories, was based upon the best available scientific evidence expressed in the findings of the United States Preventive Services Task Force and supported by forthcoming guidelines, for example on mammograms, from the National Cancer Institute. They were based on the best available scientific evidence, I will say again. And I very much appreciate the fact that just before we came up here today, Hillary whipped out an article that had Dr. Love quoted, and she said, "Have we done it like you said we should?" and Dr. Love said, "Yes." I felt like I had gotten an A in class. [Laughter]

I also want to emphasize that none of this can ever be fixed in stone. You hear a whole

lot of discussion as we get into the debate on the health care plan about how this or that or the other problem is not fixed. Well, my fellow Americans, this is a very dynamic thing, health care. And even the countries that have the best system, if you define "best" as high quality results, universal coverage, preventive services at lower costs, even they have continuing problems. You have to work on this forever. This is the beginning of what we should have done a long time ago, not the end of it. And one of the things that we need to make a commitment to do now is to update all these preventive approaches as new and better studies become available, based on recommendations like those we'll soon receive from the President's Special Commission on Breast Cancer. They've worked hard for 2 years, and I'm looking forward to that report.

Finally, let me say that—and this is an important thing to women who live in inner cities or remote rural areas—the best health care coverage in a policy is no good unless you can access it. We can have great policies and coverage, but we also have to have access. So we had a whole group of people who work all across America on these problems. And I myself spent a whole 4-hour period listening to this because I've worried about it for years, coming as I do from a small rural State, to be able to say to you that if this plan passes as we propose it, we'll be able to have the latest technologies given to doctors and nurses who can practice in the smallest rural communities and the most isolated parts of our large inner cities, to allow health professionals to contribute their best to all the people of this country who need these preventive services.

As you know from your efforts to gather all these signatures, change requires that people work together. But when they work together and make their voices heard, change can come. I'll never forget the meeting I had with breast cancer advocates at a hospital during the election, and I told Hillary after it was over that if we had the energy of the women who were there at that meeting concentrated on about four major things we could turn this country around in 3½ weeks.

And so I say to you in closing, we need that energy. And we will give you a vehicle,

beginning with Secretary Shalala's meeting in December, to develop a national action plan on breast cancer. But it is important that that plan be fit into a larger commitment to the health care of Americans: to put women's health concerns, from research to the delivery of health care, on an equal footing with men's; to say that it is better to focus on keeping people well than just treating them when they're sick, and when you focus on that you will find them when they're just a little sick and be able to get them well a whole lot quicker; and finally, to say that none of this will ever come to pass until we finally join the ranks of every other advanced country in this world and give every citizen of this country health care that is always there, that can never be taken away from them.

Every American can bring some weapon to this struggle, and your weapons are unique. They are not the dollars and deal-making talents of lobbyists or the stethoscopes or syringes of doctors and nurses. But they are the power of the pen and the petition and, most important of all, the power of the personal story. For in the end, America ought to be shaped by the lives of Americans, not just by the interests of Americans but by the values of Americans, not just by what we want when everything is going well but by what we need in our direst and most difficult moments.

I urge you to continue to fight in the months ahead. We can win this battle. As a part of the national drive for early breast cancer detection, tomorrow thousands of doctors and hospitals and medical centers across the country will offer discounted mammograms, thanks in no small measure to all of you.

I'm going to sign this proclamation when I finish my remarks which declares tomorrow National Mammography Day. I want to thank all the Members of Congress who pushed this through and two who are not here, Senator Biden and Congresswoman Marilyn Lloyd, who were sponsors of this legislation. And I want to remind you that you've got to continue to bring this level of intensity, of energy, of passion to this battle. You have the most powerful thing of all, personal stories. When American politics works best, it's when it reflects the lives of the American

people. You can make sure on these issues we do that. And I hope you will.

Thank you, and God bless you all.

NOTE: The President spoke at 11:33 a.m. in the East Room at the White House. In his remarks, he referred to Frances Visco, president, National Breast Cancer Coalition (NBCC); Dr. Susan Love, founder of the NBCC and director of the Breast Center at the University of California, Los Angeles; Matilda Cuomo, first lady of New York; and Lucinda Florio, first lady of New Jersey. Following his remarks, the President signed Proclamation 6615, National Mammography Day, 1993.

Proclamation 6615—National Mammography Day, 1993

October 18, 1993

By the President of the United States of America

A Proclamation

Breast cancer is an insidious disease that takes the lives of far too many women. This year alone, 182,000 American women are expected to develop breast cancer, and 46,000 will die of this disease. The risk of death from breast cancer is significantly reduced when the cancer is found in the earlier, more treatable stages of development. If women follow early detection guidelines, we should see a 30-percent drop in the breast cancer death rate. We all must work to ensure that every woman is informed about the serious risk of breast cancer and about the importance of regular breast exams and screening mammography. Most important, these health care procedures must be within the reach of all women.

The high survival rates of women who are diagnosed as having early stage breast cancer have motivated health professionals and other concerned citizens to focus their educational efforts on the importance of early detection. Women can take an active role in the fight against breast cancer through clinical breast exams, breast self-examination, and mammography. In many cases, cancers can be seen on a mammogram up to 2 years before they could be detected by a woman or her physician. The key to that advantage, however, is access to such screening.
